

Installation Instructions

OPTION 009™

Keller America's Option-009 Lightning-Surge Protection is an effective solution for pressure and level transmitter installations that are plagued with frequent damage due to electrical surge. To insure the Lifetime Warranty remains valid, the two-part system must be installed per these instructions.

Part one of this system is factory installed within the transmitter housing. Part two consists of a signal-line protector, shipped loose for installation at the control panel. Proper attention to the ground connection is crucial.

More information about the signal line protector is available at www.bourns.com.

MADE IN U.S.A.

Keller America, Inc. is the US home for Keller AG für Druckmesstechnik of Winterthur Switzerland. With over thirty years since its inception, the firm, still under the daily direction of its founder Hans Keller, continues to lead the industry in the development of media-isolated piezoresistive pressure sensors and advanced error correction techniques. At Keller, old-world craftsmanship combines with the latest in microelectronics to produce the best price-performance value in pressure measurement available anywhere in the world.

The products described herein are assembled and tested in the US using the same components and advanced manufacturing techniques in use at the Swiss factory, insuring the uncompromised quality and rapid delivery that our customers have every right to expect.
